David Sweasey

AI and Automation Architect | North Carolina Department of IT |
Innovating solutions to improve statewide efficiency and productivity
Raleigh, North Carolina, United States

Summary

As an AI and Automation Analyst at the North Carolina Department of Information Technology, I work at the intersection of machine learning, enterprise automation, and public service. My focus is on developing intelligent solutions that improve government efficiency, increase workplace productivity, and deliver real value to citizens and employees alike.

I hold a B.S. in Computer Science with a minor in Mathematics from NC State, graduating with a 4.0 GPA. My technical background includes experience in Python, C#, VB.NET, Java, C/C++, and Ruby. I specialize in Python-based data science and machine learning frameworks such as Pandas, Statsmodels, Scikit-Learn, and PyTorch. I'm also highly proficient in Microsoft Azure AI Foundry and UiPath, tools I use regularly to design, implement, and scale enterprise automation workflows.

At NCDIT, I contribute to state-wide efforts that use AI and automation to modernize government operations and improve internal processes. My work includes designing intelligent systems that reduce manual effort, optimize service delivery, and help agencies make data-driven decisions.

As a student, I led the development of a full-stack application that streamlined the IT procurement process. The platform included an interactive status tracker modeled after a pizza order tracker, educational content for users, admin functionality, and session authentication. Built in Ruby on Rails, containerized with Docker, and backed by a MySQL database, the tool improved transparency, reduced friction, and enhanced engagement for both users and staff.

In a separate project, I trained and evaluated a convolutional neural network that classified skin lesions as benign or malignant with over 90 percent accuracy. Built in PyTorch and assessed using

visualizations like heatmaps and confusion matrices, this project demonstrated my ability to apply machine learning to complex real-world problems.

My long-term goal is to continue advancing AI and automation in ways that serve the public interest. I believe in building systems that not only optimize internal workflows but also enhance the accessibility, efficiency, and accountability of public services.

Experience

N.C. Department of Information Technology
AI and Automation Analyst
June 2025 - Present (1 year 2 months)
Raleigh, North Carolina, United States

Education

North Carolina State University
Bachelor of Science - BS, Computer Science · (August 2021 - May 2025)
